

PROJECT PROFILE

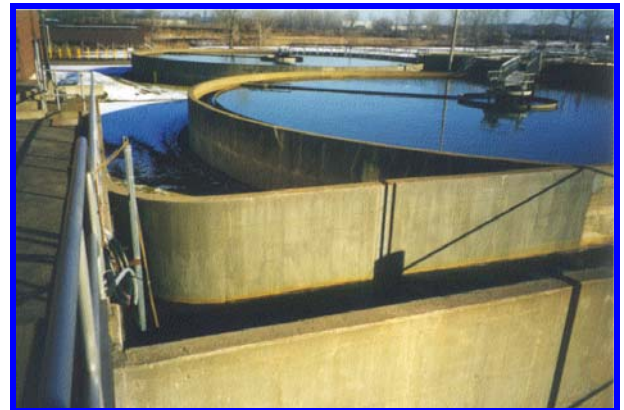

Project: Repair and waterproofing of municipal and industrial wastewater treatment and potable water facilities, **Canada**

Designer: Various specifiers

Contractor: Various contractors

Gemite product: **Cem-Kote Flex ST**

Objective: to repair and waterproof existing and new wastewater treatment facilities. **Cem-Kote Flex ST** a highly flexible polymer cement composite has been used mainly for its ability to span cracks as well as its high chemical resistance, economy and ease of application. **Cem-Kote Flex ST** has also been used in the chemical protection of concrete pipes in construction of land-fill sites and negative side waterproofing of industrial and municipal sewer manholes. **Cem-Kote Flex ST** is potable water approved in Canada and many other countries and has been extensively used in waterproofing of existing or new potable water tanks.
